Education

Rochester Institute of Technology — Rochester, NY

Honors B.S. in Information Technology | GPA: 3.70 | Dean's List (6 semesters) — *Expected Dec 2026*

Experience

Software Engineer — May 2026 – Present

Ezre LLC | ezre.app — *Remote, Washington, DC*

- Designed a way for blind users to tip from their own phone when paying on a Square POS terminal, posting the tip as a separate transaction linked to the original payment so they always know the exact amount they're tipping (React Native, Ruby on Rails, Square API). Presented the design to Square's engineering team.
- Building Ezre's Clover POS integration so blind customers automatically receive accessible, itemized receipts when they pay at Clover merchants, expanding the app beyond Square to a second major payment platform.
- Supported Ezre's deployment at the National Federation of the Blind 2026 Convention, where we processed 2,000+ receipts and gathered feedback directly from blind users.
- Turned that feedback into new features: receipt categories, receipt search, notifications for incoming receipts, and a card input form that works smoothly with VoiceOver.

Tech Lead — Jan 2026 – Present

Crafty Studio's Collaboratory, Client Platform (RIT Capstone) | GitHub — *Rochester, NY*

- Worked directly with a makerspace owner to turn an open-ended request into one platform for memberships, billing, training records, and door access, then planned the work for a seven-person team.
- Designed the system architecture and built the backend API in Java and Spring Boot, securing every user role with Spring Security, OAuth 2.0, and Auth0, and modeled the PostgreSQL database for memberships, payments, and access logs.
- Replaced a check-in process where staff had to supervise every entry with RFID door access that verifies membership, training, and waivers in real time. Logging and other background tasks run separately on AWS (SQS, EventBridge, Lambda), so the door still opens even if one of them fails.
- Building the Stripe billing integration so every payment is recorded exactly once, even when Stripe sends the same event twice, along with a daily job that recovers missed events and a weekly check that compares our membership records against Stripe.

Software Engineer — Jan 2026 – May 2026

Gestion y Sistemas — *Remote, Lima, Peru*

- Built .NET API services that move dental cases from submission through review, using Azure AI Vision to validate uploaded images and keeping a full history of corrections instead of overwriting records.
- Designed the end-to-end UI/UX in Figma for the doctor and laboratory sides of the product, then built those features in Angular.
- Integrated Microsoft Entra ID sign-in through MSAL with role-based access, so doctors and labs each see only what they're allowed to.

Technology Advisory Assistant, SAP S/4HANA Cloud Migration — Jun 2025 – Dec 2025

KPMG — *Lima, Peru*

- Supported the migration of SAP S/4HANA systems to Azure's Brazil region, consolidating 12 instances into 3, which unblocked integration with Peru's national banking API since it only accepts traffic from approved IP addresses.
- Wrote SQL and ABAP queries to check 600+ roles and 1,000+ transactions for separation-of-duty conflicts (one person holding permissions that should be split, like creating and approving the same payment), catching issues across three business units that manual review had missed.

Technical Skills

Languages: Java, Python, TypeScript/JavaScript, SQL, Ruby, C#
Backend & Distributed Systems: Spring Boot, Ruby on Rails, Node.js, .NET, REST APIs, event-driven architecture, OAuth 2.0/JWT, JPA
Cloud: Azure (Entra ID, API Management, AI Vision), AWS (Lambda, SQS, EventBridge, EC2, RDS, S3)
Data & Tooling: PostgreSQL, SQL Server, MySQL, Docker, Terraform, Git, CI/CD, JUnit, Postman, Agile
Frontend & Mobile: React Native, React, Angular, HTML/CSS, WCAG 2.1 accessibility
