

Gabriel Arias

+1 (585) 957-1977 | ariaslcr@gmail.com | [linkedin.com/in/gabriel-arias-lacruz](https://www.linkedin.com/in/gabriel-arias-lacruz) | Rochester, NY

EDUCATION

Rochester Institute of Technology

Graduating in December 2026

Honors B.S. Computing & Information Technologies, GPA: 3.70, Dean's list: 6 semesters

TECHNICAL SKILLS

Languages: Java, Python, SQL, TypeScript, C#, JavaScript

Backend & APIs: Spring Boot, Spring Security, Spring MVC, Hibernate, JPA, REST APIs, JWT, OAuth 2.0, .NET, Node.js

Databases: PostgreSQL, MySQL, SQL Server, schema design, relational data modeling

Testing & Tooling: Postman, JUnit, Maven, Swagger, Git, GitHub, Agile/Scrum

Cloud & Infrastructure: AWS (EC2, RDS, S3, Lambda, SQS, EventBridge), Azure (Entra ID, API Management, AI Vision), Azure DevOps

AI-Assisted Development: Claude Code

WORK EXPERIENCE

G&S – *Software & Cloud Engineer*

Jan 2026 – Present

- Developed full-stack features for a clinical case management platform using **Angular** and **.NET**, building **RESTful API** endpoints and role-based UI flows across Doctor and Laboratory profiles to support an AI-validated clinical workflow.
- Integrated Microsoft **Entra ID** via **MSAL** into the **.NET** authentication layer, implementing **token-based session management** and **role-based access control (RBAC)** to enforce secure, profile-level routing.
- Built backend API services handling case lifecycle state transitions from creation through AI image validation and iterative correction, designing business logic to enforce immutable audit trails and prevent inconsistent state changes across distributed user actions.
- Consumed **Azure API Management** and **Azure AI Vision** endpoints within the backend service layer to trigger automated image quality validation on clinical uploads, returning structured responses to the Angular frontend. Delivered features using **Git** and **Agile** workflows alongside a senior architect on Azure DevOps pipelines.

KPMG – *Technology Advisory Assistant*

Jun 2025 – Dec 2025

- Supported a SAP S/4HANA cloud migration and access engineering engagement using **Azure**, **SQL**, and ABAP, consolidating infrastructure and redesigning role-based access controls across a large enterprise ERP environment.
- Migrated SAP S/4HANA workloads to Azure Brazil and consolidated cloud infrastructure from 12 instances to 3, reducing operational overhead and unblocking integration with Peru's national banking API by satisfying IP whitelist requirements.
- Engineered access control policies across 600+ roles and 1,000+ transactions using **SQL** and ABAP, building automated validation queries that flagged separation-of-duty conflicts across three business units.
- Collaborated with 25+ cross-functional stakeholders to design a system-wide **RBAC** architecture, mapping organizational hierarchy to module-level permissions and delivering a governance model aligned to business unit requirements.

PROJECTS

Crafty Studio's Collaboratory, *Capstone Project*

Jan 2026 – Present

- Led **backend development** and software architecture for a full-stack makerspace management platform built with **Java**, **Spring Boot**, **Hibernate/JPA**, React, and **AWS**, serving ~1,000 monthly active users across a six-person team.
- Designed and implemented a **RESTful API** layer using **Spring Boot** and **Spring Security** with **OAuth 2.0** and **JWT-based RBAC**, securing endpoints across seven user roles and integrating Auth0 for identity federation.
- Modeled **PostgreSQL schemas** for membership, access logs, and payment records using **JPA/Hibernate** with **@SQLRestriction** annotations to enforce soft-delete semantics and audit traceability at the ORM layer.
- Wrote **JUnit** tests and used Postman collections to verify API behavior end-to-end; documented all endpoints with Swagger to streamline frontend integration and used **Maven** for build and dependency management.
- Architected an event-driven access control system using **AWS SQS** and **EventBridge** to process **RFID** hardware events asynchronously, enforcing real-time entry decisions based on membership, training, and DocuSign waiver status evaluated atomically at the door.
- Integrated **Stripe** and **DocuSign** APIs and implemented **AWS Lambda** functions in **Python** for post-payment hooks and onboarding triggers, enabling end-to-end automation of billing, waiver collection, and access gating.
- Defined API contracts and service boundaries for a team of six to enable parallel development tracks; accelerated implementation and refactoring with **Claude Code**.
